1 Executive Summary & System Architecture

The **HGG Personnel Verification System** is a digital verification portal designed to enhance credential authentication, support identity confirmation, and provide convenient verification of executive standing.

Each authorized employee ID card is printed with an official, high-density vector QR code linked to a dedicated verification endpoint:

[https://hintergroupghana.com/verify/\[EMPLOYEE-ID\]](https://hintergroupghana.com/verify/[EMPLOYEE-ID])

When scanned with a standard smartphone camera or QR reader, the system loads the official personnel record directly from the Sanity database without requiring an external application.

Operational Workflow Overview

Step 1: CMS Administration: Authorized managers create or update employee records in Sanity Studio.

Step 2: QR Code Generation: The studio provides a high-resolution vector SVG QR code featuring the official HGG gold crest.

Step 3: Card Production: The vector QR code is placed on official identity badges for commercial printing.

Step 4: Field Verification: Scanning the badge directs the reviewer to the official verification page, displaying either a **Verified Active** identity or an **Unrecognized Record** notification.

2 Sanity Studio Administration Guide

2.1 Accessing the Studio Portal

The administration portal is hosted at:

<https://hintergroupghana.com/studio>

Authorized administrators sign in using approved corporate credentials via Google Workspace, GitHub, or direct Email/Password authentication.

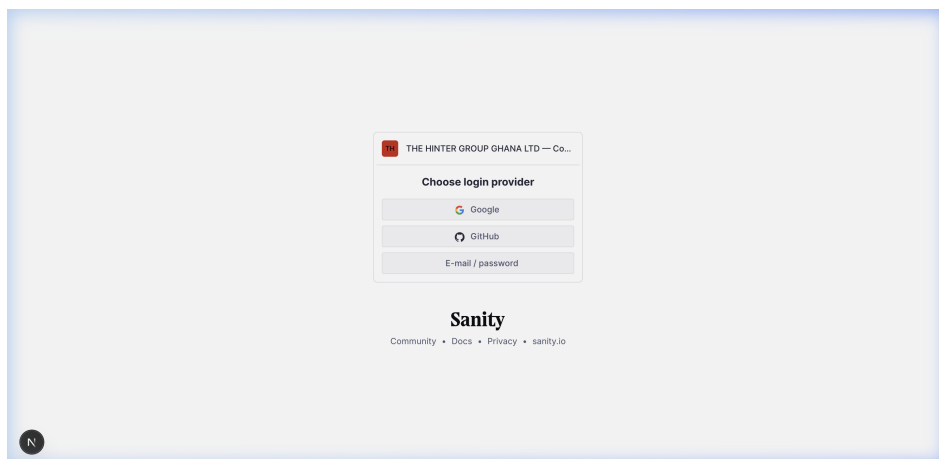

Figure 1: Sanity Studio Authentication Interface

2.2 Managing Employee Records

To create or modify an employee credential:

1. In the left-hand navigation pane, select **"Employee ID & Verification"**.
2. Click the **"Create new"** icon (or select an existing record to edit).
3. Complete the administrative record organized into two dedicated studio tabs:

- **Tab 1: Public Credential (Card & Verification):**

- **Employee ID:** Auto-generated with the next sequential ID in sequence (HGG-001, HGG-002). The system validates uniqueness.
- **Full Name:** Full legal name as printed on the official badge (e.g., *Charles N. Hammond*).
- **Position / Official Role:** Corporate executive title (e.g., *Chairman & Chief Executive Officer*).
- **Organization:** Defaults to THE HINTER GROUP GHANA LTD.
- **Department / Division:** Corporate division (e.g., *Executive Leadership & Governance*).
- **Verification Status:** Active / Verified, Inactive / Expired, Or Suspended / Under Review.
- **Card Issuance Date:** Date of official issuance or badge printing.
- **Approved Official Portrait:** High-resolution executive portrait image with interactive focal cropping.

- **Tab 2: Confidential Personal Info (CMS Only)** — *Strictly for internal HR records; never displayed on public verification page:*

- **Date of Birth:** Confidential employee date of birth.
- **Residential / Home Address:** Internal residential address.
- **Personal Telephone Number:** Direct personal contact telephone.
- **Personal Email Address:** Direct personal email address.
- **Government ID / Passport / Ghana Card:** Official national identification number for compliance.
- **Emergency Contact Details:** Emergency contact name and phone number.
- **Internal Administrative Notes:** Private internal reference remarks and clearance notes.

4. Click **"Publish"** at the bottom right. Credential updates are reflected dynamically through the central registry.

3 QR Code Generation & Badge Manufacturing

Sanity Studio features an integrated **Employee QR Codes** management tool designed specifically for graphic designers and commercial badge printers.

3.1 Export Formats for Physical Badges

Inside the **Employee QR Codes** tab in the top studio bar, administrators can view live previews and export codes in two primary formats:

Export Format	Technical Specification	Recommended Application
Vector SVG	Scalable Vector Graphics with embedded HGG crest	Commercial PVC ID card printing, laser engraving, Adobe Illustrator / InDesign layouts. Lossless quality at any scale.
High-Res PNG	1200 × 1200 px raster with transparent background	Digital credentials, email badges, executive presentation summaries, PDF documents.

Table 1: Official QR Code Export Specifications

Printing Guidelines for Card Manufacturers

- **Recommended Dimensions:** It is recommended that the QR code be printed at no less than **20mm × 20mm** (0.8" × 0.8") for consistent scanning performance across mobile devices.
- **Contrast:** Maintain pure black-on-white or dark-navy on white background. Do not invert the QR modules.
- **Error Correction:** Built with **Level H** error correction for improved scanning reliability, helping maintain readability under standard physical handling.

3.2 Official Example QR Code (Permanent Corporate Endpoint)

Below is an authentic, production-ready example QR code generated with the HGG central shield emblem and metallic gold border frame. Scanning this QR code with any smartphone camera opens the live personnel credential record on the permanent corporate domain:

Direct Verification URL:

<https://hintergroupghana.com/verify/HGG-001>

Figure 2: Official Production QR Code · Configured for <https://hintergroupghana.com/verify/HGG-001>

4 End-User Scanning Experience: Verified Identity

When a valid employee badge is scanned, the browser displays a luxury executive verification credential.

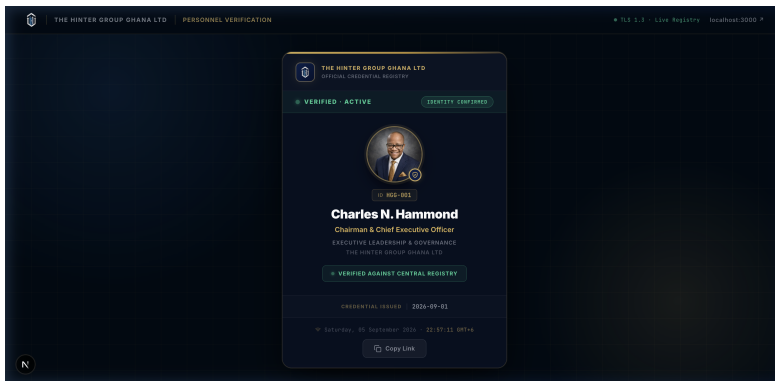

Figure 2: Verified Identity Page — Desktop View

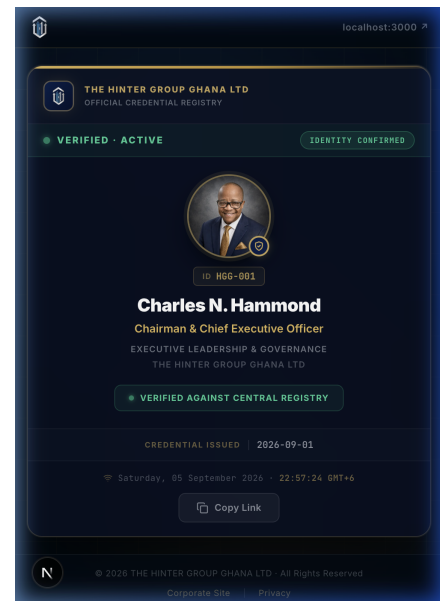

Figure 3: Mobile View

4.1 Component-by-Component Breakdown

- **Institutional Top Bar:** Displays the HGG logo, system designation ("*Personnel Verification*"), and a green pulsing TLS 1.3 · Live Registry indicator.
- **Organization Header:** Official HGG crest and "*Official Credential Registry*" designation.
- **Status Banner:** Pulsing emerald status dot with VERIFIED · ACTIVE and IDENTITY CONFIRMED security pill.
- **Biometric Portrait:** 104px circular portrait bordered in gold with an official gold verified shield emblem.
- **Employee ID Pill:** High-contrast monospaced badge displaying the unique identifier (e.g., HGG-001).
- **Executive Typography:** Bold full name, gold-accented corporate title, division, and organization name.
- **Central Registry Badge:** Direct confirmation pill affirming "*Verified against central registry*".
- **Credential Issue Date:** Synchronized issuance date matching the physical card.
- **Live Verification Clock:** Real-time Greenwich Mean Time (GMT) clock updating each second, helping users determine whether they are viewing the current verification page.
- **Copy Verification Link:** One-click utility allowing border officials, corporate security, or banking partners to copy the authenticated verification URL.

5 End-User Scanning Experience: Unrecognized / Invalid Record

If an altered, revoked, or fabricated QR code is scanned, the verification portal immediately flags the credential with a **Credential Not Recognised** security alert.

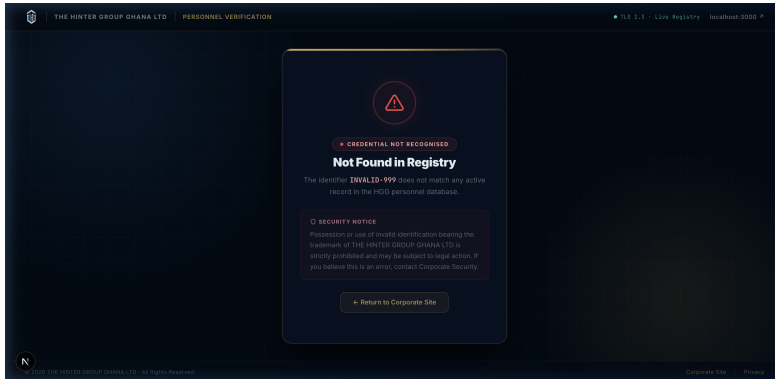

Figure 4: Unrecognized Record Warning — Desktop View

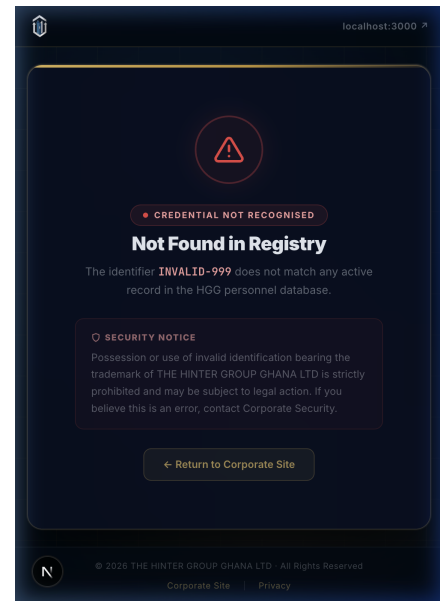

Figure 5: Mobile View

5.1 Security Response Components

- **Red Alert Shield:** Prominent red warning ring signifying authentication failure.
- **Status Pill:** Crimson alert badge reading CREDENTIAL NOT RECOGNISED.
- **Queried Code Display:** Quotes the scanned ID (*e.g.*, INVALID-999) and explicitly notes that no matching record exists in the HGG database.
- **Legal Advisory Notice:** Corporate warning stating that unauthorized possession or reproduction of credentials bearing the trademark of The Hinter Group Ghana Ltd is strictly prohibited and subject to legal prosecution.
- **Return Link:** Direct navigation button returning the user safely to the corporate site.

6 System Architecture & Data Governance

Governance Layer	Technical Implementation	Operational Assurance
Search Engine Privacy	robots.txt disallow rules + noindex, nofollow, noarchive, nosnippet meta tags	Instructs search engines and crawlers not to index personnel verification records or photos.
Current Page Indicator	Real-time JavaScript clock with GMT time synchronization	Provides a visible dynamic time reference that helps reviewers determine whether they are viewing the current verification page.
High Error Correction QR	ISO/IEC 18004 Level H with vector HGG emblem	Provides high error correction for improved scanning reliability under typical physical handling.
Dynamic Registry Updates	Server-side dynamic fetching (revalidate: 0)	Credential updates are reflected dynamically through the central registry when published in Sanity Studio.
Transport Encryption	TLS 1.3 cryptographic handshake	Standard transport encryption protecting communication between user devices and the registry servers.

Table 2: System and Data Governance Overview

6.1 Employee Privacy Policy & Data Minimization

To safeguard personnel privacy and maintain institutional discretion, the public verification endpoint adheres to strict data minimization standards:

- **Authorized Fields Only:** Only verified professional credentials are displayed: photograph, legal full name, corporate title, employee ID, organization, department, credential status, and issuance date.
- **Exclusion of Sensitive Personal Information:** Home addresses, dates of birth, personal telephone numbers, personal email addresses, and national identification numbers are strictly excluded from the verification endpoint and are never displayed publicly.
- **Search Engine De-Indexing:** Verification endpoints are configured with robots.txt disallow rules and noindex, nofollow, noarchive, nosnippet meta headers, instructing search engines not to index employee records.
- **No Public Directory:** Verification operates exclusively on a single-record lookup basis via individual cardholder QR codes. No publicly browsable directory exists. The corporate **Leadership** page remains the designated public-facing presentation for executive leadership.

Recommended Administrative Practices

1. **Periodic Audits:** Regularly audit the Sanity Studio registry to ensure former staff or expired contracts are transitioned to *Inactive* status.
2. **Credential Status Updates:** If an ID badge is lost, retired, or under review, update the status to *Inactive* or *Suspended* in Sanity Studio. Subsequent scans of the badge will reflect the updated status accordingly.
3. **Badge Production:** Provide the commercial printer with the official **Vector SVG** file downloaded directly from Sanity Studio.
